

The BurnSoft System Uptime Tool is a simple console application used to calculate the uptime of the local machine or a remote machine. It's a simple application that uses the Windows Performance counters to get the uptime of the machine.

```
Host name is burnsoft1404
2 hours, 15 minutes, 49 seconds
Press enter/return key to continue.
```

Switch	Description
/host=[machine]	Optional is you want to check a remote machine, otherwise it will look at local.
/copy	Copy the uptime results to clipboard
/only	Only display on the console, if not selected then it will display anyways
/nodisplay	Write nothing to the console
/noevent	Don't write to the NT Event Log
/help or /?	Display help and app version
